

A SF7: full packet CRC + exact bytes**B Native latency and accepted/attempted counts**

Actual LR2021 RF → XIAO native C++ decoder; no PC decoding, no retries; one stationary indoor pair.

SF7: four CRs × five lengths. SF8/9: CR4/5 and 4/8 × 8/32 bytes. SF10–12: CR4/5, 8 bytes.

500 ms acquisition at SF7–9; 900 ms at SF10–12, then decoding blind time. Circles: accepted; crosses: rejected.

Single-attempt cells demonstrate tested settings, not estimated reliability or receiver sensitivity.
