

A Stored-word integrity

B Copy budget

C Independent SF7 RF packets

A-B: 3 alternating deterministic checks, no RF keying; repeated readbacks are not independent statistical trials.
C: 48/48 fresh randomized packets; SF7/BW203.125 kHz, one stationary board pair; descriptive Wilson 95% 92.59–100.00%.
CRC + exact full bytes required. SF8 remains unsuccessful. Grant release does not establish gapless analog RF output.
